

ASE5300-ID

SiPass®
integrated

Photo ID and image verification license

- **Easy capture of photographs for ID card production**
- **Live-image verification for enhanced security**
- **Customizable high-performance ID card production**

The ASE5300-ID software enables the system to quickly and easily capture cardholder photographs and print a personalised access card that includes the photo for each cardholder. This ability to combine cardholder photographs with their access and personal information strengthens any security system. Within minutes it is possible to construct a custom-designed card template, complete with company logo, photograph and signature, plus eye-catching graphics.

This module also enables live-image verification for enhanced security. In snapshot mode, an image is captured from a video surveillance camera for comparison with a cardholder photo. In host-verification mode, access to the door is controlled by the SiPass integrated operator.

Features

- Live capture of cardholder photographs
- Image import function with support for up to 32 image file types
- Ability to create and design customized card templates
- Double-sided card printing
- Live imaging and card printing can be performed using Windows 2000/XP
- Easy and high-performance capture of photographs for personal data
- Easy picture cutting
- Customizable printing and imaging preferences
- Preview of ID cards to be printed
- Display of printing process

Description

The Photo ID & Image Verification option allows imaging and capturing duties to be performed using a standard SiPass integrated client. The Photo ID & Image Verification option allows you to enhance cardholder records by capturing photographs and signatures with ease. Once captured, these images can be incorporated onto an access card and/or be used as a means of visual verification. The images are stored safely in the SiPass integrated database which allows them to be easily backed up and restored.

Professional-looking card templates can be designed in minutes using the built-in suite of drawing and design tools. These tools allow you to incorporate graphics, photographs, signatures and even database fields (that update dynamically) on a card template.

Once a template has been created, an access card can be printed immediately to a card printer. In this way, a unique card can be created for every cardholder programmed in the database.

SiPass integrated also records all card printing activity. You can determine how many cards have been printed per cardholder and the date on which the card was last printed.

An intelligent selection functionality allows you to print the cards in piles. Once the filter parameters have been selected, a list of the cards to be printed is displayed. This special feature is very convenient when printing a large number of ID cards.

System Requirements

One of the following core software packages is required:

Type	Part no	Designation
ASL5000-SE	6FL7820-8AA10	SiPass integrated Standard
ASL5000-OA	6FL7820-8AA20	SiPass integrated Optima

Details for ordering

To order the SiPass integrated software extensions, you must first complete a software license order form. Please contact your SiPass integrated supplier for further information.

Type	Part no	Designation
ASE5300-ID	6FL7820-8AE02	Photo ID and image verification license
